LATEX

OVERVIEW

- Brief history Of LaTeX**
- What is LaTeX?**
- How does differ form another editor like Microsoft Word?**
- How can be used and Who can use Latex ?**
- Types of LaTeX and Required package or tools.**
- Using LaTeX, Example of Writing**
- Template of some University style**
- Summery**

Brief History of LaTeX

- ❑ TeX, late 1970's [1], It was created by Professor [Donald Knuth](#) of Stanford University, originally for preparation of his book series
- ❑ As a typesetting program for text and mathematical formulae.
- ❑ LaTeX was developed in the early 1980's by *Leslie Lamport* as a higher level language that uses TeX
- ❑ He introduced predefined document styles, automatic cross references, automatic numbering and a variety of other useful features.
- ❑ LaTeX is 2e which was first released in 1994, with numerous of packages

What Is Latex

- * **LaTeX** is a document preparation system for high-quality typesetting.
- * LaTeX is usually not like Word in that you can type and click buttons to get what you want.
- * You usually have to "code" a little bit.
- * LaTeX uses a plain text markup language which is compiled into a PDF document using optimal typographical rules.

What Is Latex

- Use for medium-to-large technical or scientific documents
- Can be used for almost any form of publishing [1].
- LaTeX encourages authors *not* to worry too much about the appearance of their documents but to concentrate on getting the right content.
- creation of templates which do not require advanced knowledge of LaTeX to use
- LaTeX user to create beautiful documents and learn LaTeX as they go.

How does Latex differ from another editor like Microsoft Word?

Microsoft Office Word :

- Easy to Use, Available may be in every PC.
- Direct Writing the Idea without need to writing codes.
- Creating tables and insert figures or pictures is simple
- Maybe Can use with some programs that make it is easy to follow with Citation.

How does Latex differ from another editor like Microsoft Word?

- ❑ However MS Word have some drawback:
 - NOT free,
 - Not easy to keep track with the equations, figures etc Number as well as the table of contains .
 - Mostly writer worry about the output what is look like
 - Difficult to maintain the same manner with inserting Pictures or Figures of writing.
 - Not easy to use new version.

How does *LaTeX* differ from another editor like Microsoft Word?

The main advantage of **LaTeX** over MS Word

- Free of Charge
- Easy to form any type of writing like thesis
- Easy to make Template
- Can Use Package
- The programs design to keep track with number of equations, figures, chapters, ... etc.
- Some University and Journal they have there own template of latex

How many type of LaTeX ?

Tow Types :

- ❖ use it **ONLY** on your laptop or home computer,
- ❖ Another **total portability**.

I really like the totally portable solution for students who switch often between computers, but if you always use your own laptop you are better off with the first solution. Or may be the installation one

LaTeX Types

* **Totally portable --- LaTeX online**

- online LaTeX editors. A couple of good options are [ShareLaTeX](#) and [Overleaf](#).
- Available everywhere including on iOS, no need to install, have your file both on and off campus, no need to sync devices/files)
- disadvantages (requires an internet connection, need to upload graphics, usually slower compilation times).

LaTeX Types

LaTeX on your desktop or laptop

- * You'll need to install LaTeX and all the associated tools.
- * For Windows, **MikTeX** with **TeXMaker** .
<http://miktex.org/download> ,
<http://www.xm1math.net/texmaker/>
- * For the Mac, MacTeX, .
- * These programs must be installed, So no need to internet connection.

Using Latex

1. Starting with LaTeX
2. Import Pictures and Figures , Label, ref
3. Create Table or Matrix
4. Citation

Windows of Latex, TexMaker

Starting With LaTeX

PREAMBLE, you tell the text editor what kind of document you're making, what packages you're using, Packages allow the use of certain commands or they are used for formatting. For example `\usepackage{fullpage}` tells the text editor to use the full page when generating the pdf, and `\usepackage{graphicx}` allows images to be inserted into the document.

```
1 \documentclass[12pt]{article}
2
3 \usepackage{fullpage}
4 \usepackage{graphicx}
5 \usepackage{amsmath}
6
7 \title{2.086 Lab 7}
8 \author{Marcel Thomas}
9
```

Preamble

Document

```
10 \begin{document}
11 \maketitle
12 \begin{enumerate}
13
14 \item[3.]
15
16 \begin{align*}
17 \mathhtt{OBJECTIVE \_ NEW \_ VAL} \&= 21.0600 \\\
18 \mathhtt{max(U \_ bestalpha)} \&= 60
19 \end{align*}
20
21 The value of  $\mathhtt{max(U \_ bestalpha)}$  is correct.
22
23 \begin{figure}[h]
24 \centering
25 \includegraphics[scale=0.7]{Umu}
26 \caption{A plot of  $\mathhtt{U \_ bestalpha}$ .$}
27 \end{figure}
28
```

Interesting Packages

Other interesting packages:

```
# tlmgr install amsmath babel carlisle ec geometry graphics hyperref lm
marvosym oberdiek parskip pdftex-def url
```

<code>amsmath</code>	The essentials for math typesetting.
<code>babel</code>	Internationalization support.
<code>carlisle</code>	Bundle package required for some <code>babel</code> features.
<code>ec</code>	Required for T1 encoding.
<code>geometry</code>	For page layout.
<code>graphics</code>	The essentials to import graphics.
<code>hyperref</code>	PDF bookmarks, PDF followable links, link style, TOC links, etc.
<code>lm</code>	One of the best Computer Modern style font available for several font encodings (such as T1).
<code>marvosym</code>	Several symbols, such as the official euro.
<code>oberdiek</code>	Bundle package required for some <code>geometry</code> features.
<code>parskip</code>	Let you configure paragraph breaks and indents properly.
<code>pdftex-def</code>	Required for some <code>graphics</code> features.
<code>url</code>	Required for some <code>hyperref</code> features.

If you installed a package you do not need anymore, use

```
# tlmgr remove <package>
```

2.2.5. Hyphenation

Starting Example

```
\documentclass{article}
\usepackage{microtype}
\title{Electrical Power and Machines Engineering Department }
\author{Qaaim Al Azze}
\date{September 1994}
\begin{document}
\maketitle
University of Diyala is the first high education institute in
Diyala province. UOD has been graduated a lot of student in
many field of humanity and sciences; History education, Arabic
Language, Chemistry Science, Mathematic Science, Engineering
.....etc.
\end{document}
```

Electrical Power and Machines Engineering Department

Qaaim Al Azze

September 1994

University of Diyala is the first high education institute in Diyala province. UOD has been graduated a lot of student in many field of humanity and sciences; History education, Arabic Language, Chemistry Science, Mathematic Science, Engineering ..etc.

Example

```

\documentclass[a4paper,12pt]{article}

\usepackage[english]{babel}
\usepackage{graphicx}

\begin{document}

\begin{figure}[!ht]
  \caption{A picture of a gull.}
  \centering
  \includegraphics[width=0.5\textwidth]{gull}
\end{figure}

\begin{figure}[!ht]
  \centering
  \reflectbox{%
    \includegraphics[width=0.5\textwidth]{gull}}
  \caption{A picture of the same gull
    looking the other way!}
\end{figure}

\begin{table}[!ht]
  \begin{center}
    \begin{tabular}{| l c r |}
      \hline
      1 & 2 & 3 \\
      4 & 5 & 6 \\
      7 & 8 & 9 \\
      \hline
    \end{tabular}
  \end{center}
  \caption{A simple table}
\end{table}

```

Notice how the tables and figures

Figure 1: A picture of a gull.

Figure 2: A picture of the same gull looking the other way!

1	2	3
4	5	6
7	8	9

Table 1: A simple table

Notice how the tables and figures have independent counters.

PhD/MPhil Thesis - a LaTeX Template

A new version of this, by Krishna Kumar, is available. Features include -

- Conforms to the Student Registry PhD dissertation guidelines and CUED PhD guidelines
- Supports LaTeX, XeLaTeX and LuaLaTeX
- Adaptive Title Page: Title page adapts to title length
- Title page with both College and University crests.
- Print / On-line version: Different layout and hyper-referencing styles
- Pre-defined and custom fonts (Times / Fourier / Latin Modern) with math support
- Supports system fonts (XeLaTeX)
- Pre-defined and custom bibliography style support (authoryear / numbered / custom)
- Custom page styles: 3 Different Header / Footer styles
- Pre-defined and custom margin size
- A separate abstract with thesis title and author name, along with the titlepage can be generated by passing the argument abstract to the document class.
- Option to generate only specific chapters and references without the frontmatter and title page. Useful for review and corrections.
- Draft mode: Draft water mark, timestamp, version numbering and line numbering

Downloading

- *LyX Template* - <https://github.com/kks32/PhDThesisLyX/releases>

Older versions are still available, but no longer supported.

About the LaTeX thesis templates

The thesis templates have been created to make it easy to prepare your thesis using LaTeX while adhering to the MIT Thesis Specifications. We make every effort to keep these up to date, but you should always consult the [MIT Libraries Thesis Specifications](#) before submitting your thesis. If you notice something in the Thesis Specifications that does not match the templates, please let us know by e-mailing us at thesis@mit.edu.

The thesis templates are highly customizable, and there are many options and macros available for your use. Most of these are documented in the comments in each file, especially `main.tex`. You are encouraged to read through the comments.

Downloading

You may download the thesis templates here: [templates.zip](#).

Templates › Thesis › Harvard PhD

About

Harvard University PhD thesis template. Clean and elegant, based on Arno Pro font. Distributed under MIT License. Written by Jordan Suchow and Andrew Leifer.

arabtex – Macros and fonts for typesetting Arabic

ArabT_EX is a package extending the capabilities of T_EX/L^AT_EX to generate Arabic and Hebrew text. Input may be in ASCII transliteration or other encodings (including UTF-8); output may be Arabic, Hebrew, or any of several languages that use the Arabic script.

ArabT_EX consists of a T_EX macro package and Arabic and Hebrew fonts (provided both in METAFONT format and Adobe Type 1). The Arabic font is presently only available in the Naskhi style. ArabT_EX will run with Plain T_EX and also with L^AT_EX.
