THE AIM OF THIS RESEARCH

Design and implement a smart security system:–

- To protect companies, homes and factories or any building against danger, damage, and any criminal activity.
- To help in getting timely information about visitors at building.

COMPONENTS

- 1- ARDUINO
- 2- PASSIVE INFRARED SENSOR (PIR SENSOR)
- 3- LASER DETECTOR.
- 4- RELAY MODULE
- 5- GSM MODEM
- 6- MOBILE PHONE
- 7- LCD (LIQUID CRYSTAL DISPLAY)
- 8- KEYPAD

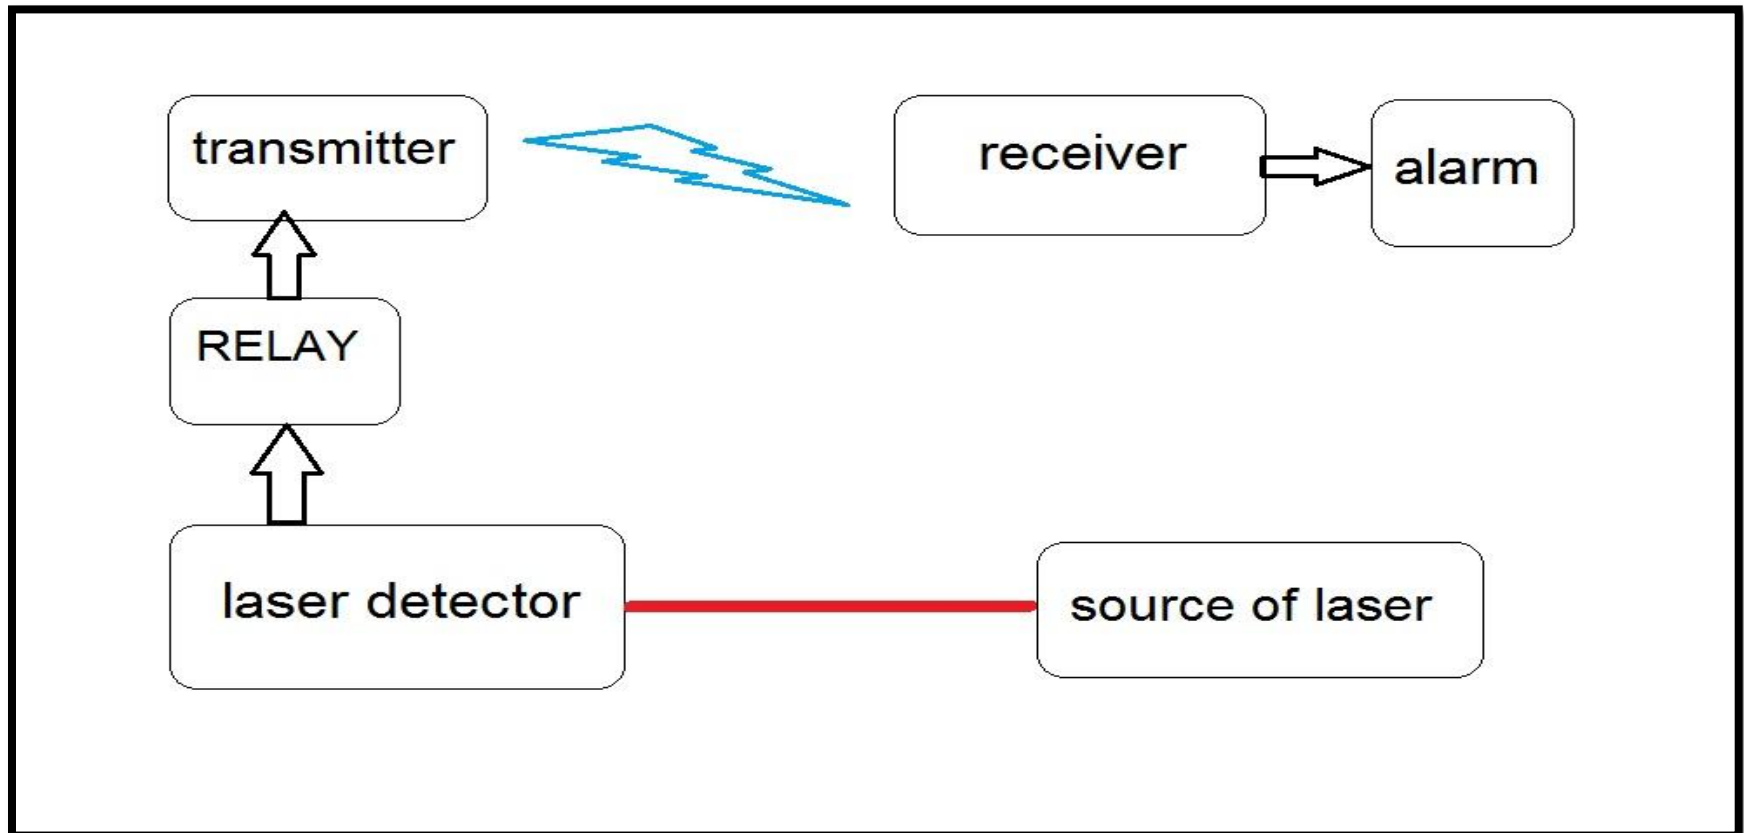

SECURITY

A Security System provides a form of protection that ensures the safety and security of the assets and the threat but is not limited to the elimination of either the threat.

PROPOSED SYSTEM

1- Security Alarm System (without GSM)

Block Diagram of Wireless Security by Alarm

Hardware of Wireless Security by Alarm

2- SECURITY ALARM SYSTEM (WITH GSM AND PASSWORD AUTHENTICATION)

GSM (Global System for Mobile Communications) modem in this system is a mobile phone.

the Arduino Uno Board are used to communicate between the mobile phone and the devices and sensors installed at building.

PASSWORD AUTHENTICATION:

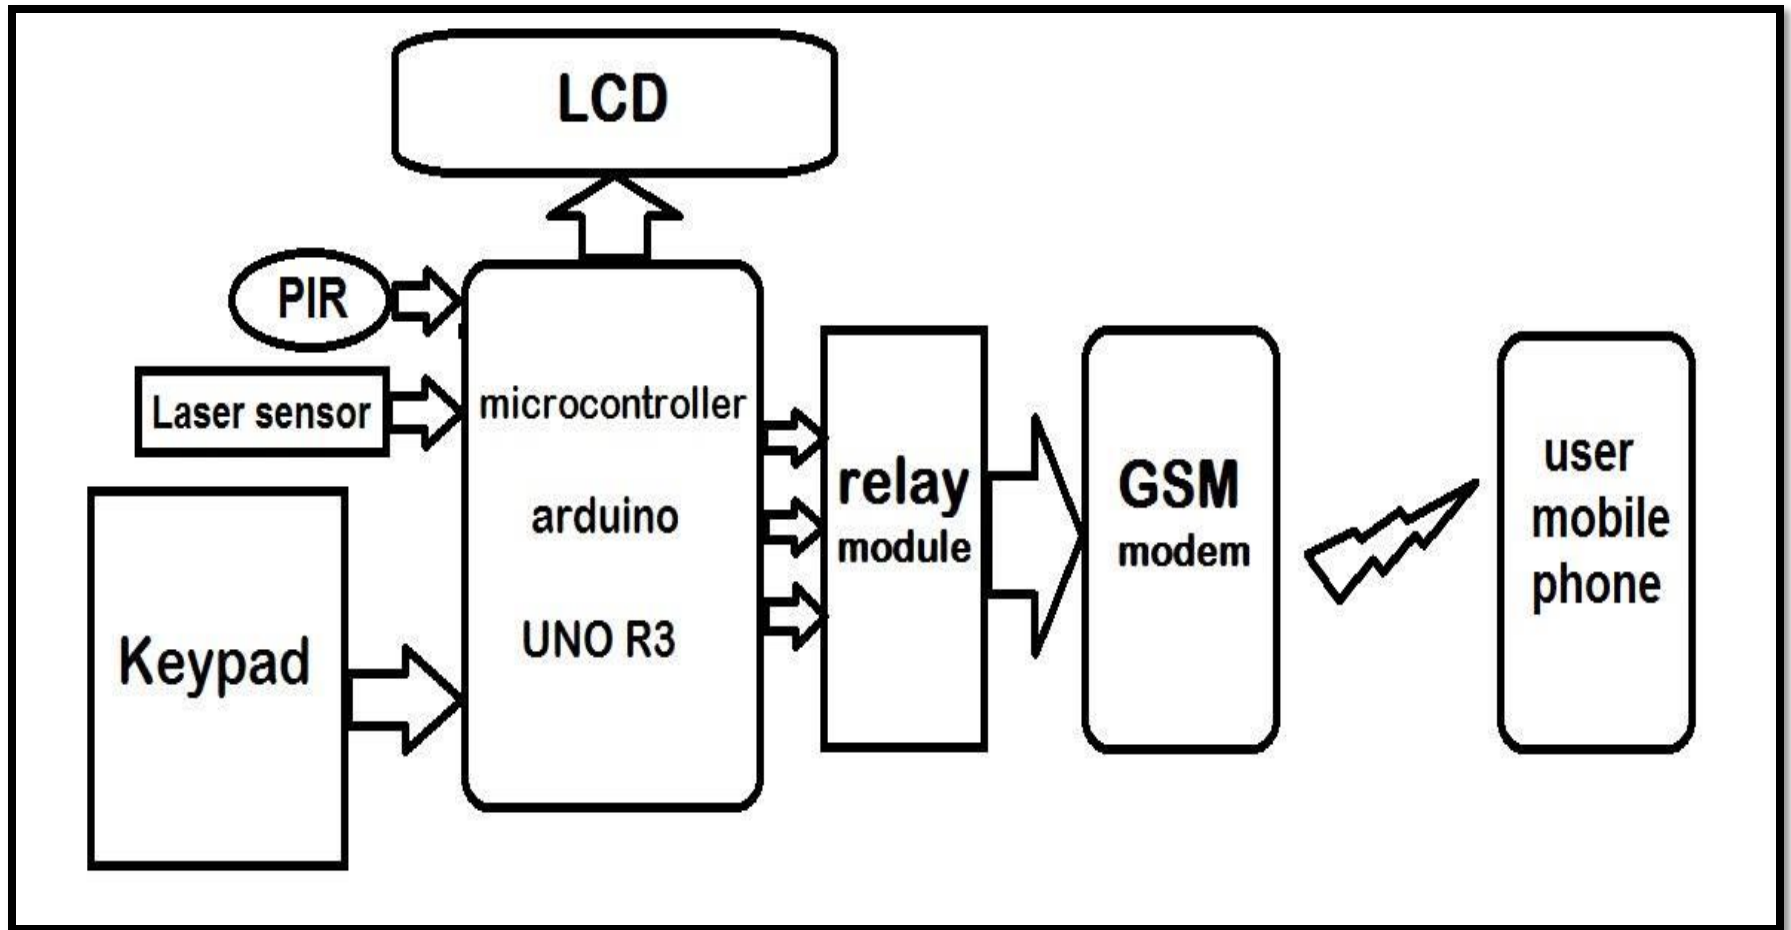

This system stores password of authenticated users for the purpose of validation.

Security Alarm System with GSM(FOR UNAUTHORIZED USER) into :

1- SMS(Short Message Service)

2- MMS (Multimedia Message Service)

Wireless security system by GSM- SMS

SUMMARY

- ❖ high layer security system, Reliable and Durable.
- ❖ Low power consumption, only 2.4mWatts,
- ❖ No need to keep eye on surveillance continuously,
- ❖ Highly sensitive LASER sensor for any cutting from burglars or any moving body, each PIR sensors can cover 10-45 meters and More PIRs can be connected parallel for larger space
- ❖ Can be used in any building like Home Security System, in Museum or Bank .
- ❖ Low cost operating system using Arduino module [AT-mega328] in C programming language and Overall cost effective and parts are easily available on the market.

Thank you
