# Academic Programand CourseDescription Guide

2024-2025

# **Introduction:**

The educational program is a well-planned set of courses that include procedures and experiences arranged in the form of an academic syllabus. Its main goal is to improve and build graduates' skills so they are ready for the job market. The program is reviewed and evaluated every year through internal or external audit procedures and programs like the External Examiner Program.

The academic program description is a short summary of the main features of the program and its courses. It shows what skills students are working to develop based on the program's goals. This description is very important because it is the main part of getting the program accredited, and it is written by the teaching staff together under the supervision of scientific committees in the scientific departments.

This guide, in its second version, includes a description of the academic program after updating the subjects and paragraphs of the previous guide in light of the updates and developments of the educational system in Iraq, which included the description of the academic program in its traditional form (annual, quarterly), as well as the adoption of the academic program description circulated according to the letter of the Department of Studies T 3/2906 on 3/5/2023 regarding the programs that adopt the Bologna Process as the basis for their work.

# Concepts and terminology:

**Academic Program Description:** The academic program description provides a brief summary of its vision, mission and objectives, including an accurate description of the targeted learning outcomes according to specific learning strategies.

<u>Course Description</u>: Provides a brief summary of the most important characteristics of the course and the learning outcomes expected of the students to achieve, proving whether they have made the most of the available learning opportunities. It is derived from the program description.

<u>Program Vision:</u> An ambitious picture for the future of the academic program to be sophisticated, inspiring, stimulating, realistic and applicable.

<u>Program Mission:</u> Briefly outlines the objectives and activities necessary to achieve them and defines the program's development paths and directions.

<u>Program Objectives:</u> They are statements that describe what the academic program intends to achieve within a specific period of time and are measurable and observable.

<u>Curriculum Structure:</u> All courses / subjects included in the academic program according to the approved learning system (quarterly, annual, Bologna Process) whether it is a requirement (ministry, university, college and scientific department) with the number of credit hours.

<u>Learning Outcomes:</u> A compatible set of knowledge, skills and values acquired by students after the successful completion of the academic program and must determine the learning outcomes of each course in a way that achieves the objectives of the program.

<u>Teaching and learning strategies:</u> They are the strategies used by the faculty members to develop students' teaching and learning, and they are plans that are followed to reach the learning goals. They describe all classroom and extracurricular activities to achieve the learning outcomes of the program.

# **Academic Program Description Form**

University Name: University of Diyala

Faculty/Institute: College of Engineering

Scientific Department: Department of Computer Engineering

Academic or Professional Program Name: BSc in Computer Engineering

Final Certificate Name: BSc in Computer Engineering

Academic System: Courses

Description Preparation Date: 16 / 4 2025

File Completion Date: 16 / 4 2025

Signature:

Head of Department Name:

Assist. Prof. Dr. Ali N. Albu-Rghaif

Date: 16 / 4 / 2025

Signature:

Scientific Associate Name:

Prof. Dr. Jabbar Q. Jabbar

Date: 16 / 4 / 2025

The file is checked by: Assist. Prof. Dr. Salah N. Farhan

Department of Quality Assurance and University Performance

Director of the Quality Assurance and University Performance Department:

Date: 16 / 4 / 2025

Approval of the Dean Prof. Dr. Anees A. Khadom

16 / 4 / 2025

#### 1. Program Vision

The computer engineering department is a "distinct" model for the production and development of engineering and technological knowledge to prepare qualified engineering cadres capable of supporting and developing the society in the fields of computing, information technology and software.

#### 2. Program Mission

Develop the engineering cadres by providing them with modern technological knowledge in various branches of computer engineering sciences to enable them to carry out the various engineering projects efficiently and professionally with high accuracy and perfection as required by the labor market and to continue scientific and academic progress through keeping abreast of the accelerating global developments.

#### 3. Program Objectives

- Developing specialized engineering programs that conform to international quality standards in the field of computers and software, through which they can provide engineering cadres able to prove their worth in the field of work.
- 2. Developing the abilities and skills of the teaching staff and the staff to improve the educational and research reality in the department.
- 3. Serving the local and international community through the development of applied and academic research to solve various problems in the industrial and engineering fields.
- 4. To provide an advanced learning and research environment suitable for the students of the department of students and cadres of engineering, engineering and teaching to produce high quality educational and engineering leaders.

4. Program Accreditation	
Not at the moment	

5. Other external influences	
No

8. Expected learning outcomes of the program								
Know	ledge							
1.	Teaching the student, the principles of how computers work and how to deal with computer algorithms.	Learning Outcomes Statement 1						
2.	Enabling students to obtain knowledge and understanding in working on and designing electronic computers.							
3.	Teaching the student, the methods of forming computer parts and their interconnection.							
4.	Enabling students to obtain knowledge and understanding of designing everything related to computer microprocessors.							
5.	Enabling students to obtain knowledge and understanding of diagnosing faults and maintaining various computer devices.							
6.	Teaching the student the foundations of solving programming problems, computer networks, and communications.							
Skills								
•	Explanation of computer principles topics by specialists in the subject, with an emphasis on the use of mathematics as a basis for understanding and learning.							
•	Providing them with skills to solve practical problems related to various computer systems and computer programs for addressing and solving technical problems in various fields of computerized work.							
Ethics								
•	Enabling students to think and analyze topics related to the engineering framework, such as various logical circuits.							
•	Enabling students to think and analyze topics related to computer systems related to the engineering framework.							
•	Enabling students to think and analyze topics related to solving practical problems.							

# 9. Teaching and Learning Strategies

- Providing students with the basics and additional topics related to previous educational outcomes and skills to solve practical problems.
- Solving a group of practical examples by the academic staff.
- Students participate during the lecture in solving some practical problems.
- The department's scientific laboratories are monitored by the academic staff.

#### 10. Evaluation methods

- Daily exams with practical and scientific questions.
- Participation marks for difficult competition questions among students.
- Assigning grades to homework assignments and reports assigned to them.
- Monthly exams for the curriculum in addition to the final exam.

# **Professional Development**

### Mentoring new faculty members

Faculty members are instructed to hold regular meetings and review questionnaires received from students with the Scientific Committee.

### Professional development of faculty members

The teaching staff undergoes development through training, workshops, and seminars. Progress is evaluated by subject performance.

# 12. Acceptance Criterion

According to the rules and regulations of Ministry of Higher Education and Scientific Research.

# 13. The most important sources of information about the program

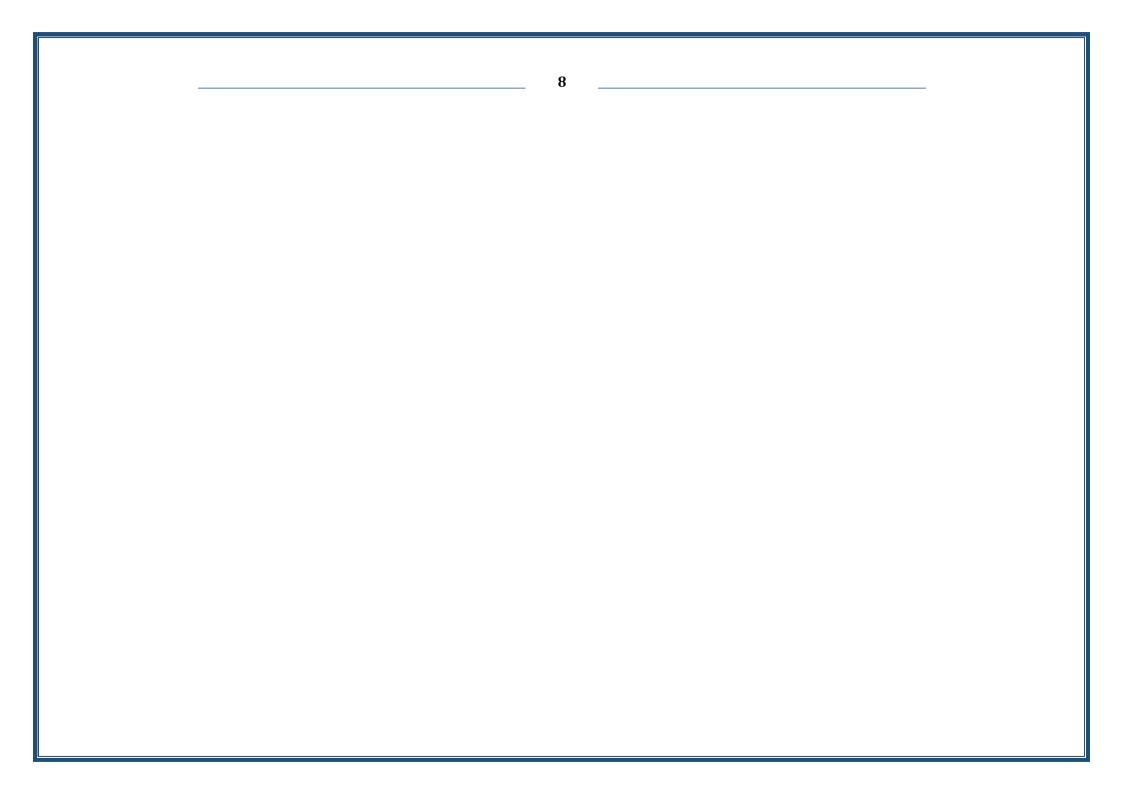

- ✓ College website.
- ✓ The department's website and contact the department by email.

# 14. Program Development Plan

- ✓ The courses are updated annually to keep up with developments in computer science
- $\checkmark$  the laboratories are also updated under academic curricula.
- ✓ Additionally, postgraduate programs are now being offered.

#### 8. Course Objectives

#### **Course Objectives**

- The engineering ethics curriculum aims to introduce the student to the skills of engineering ethics, the field of applied ethics, and a system of ethical principles that apply to the practice of engineering. This field deals with the obligations of the engineer towards society, towards his clients and his profession, and as a scientific discipline, it is closely related to many topics such as the philosophy of science, the philosophy of engineering and the ethics of technology.
- The student learn ,The Professional Model ,Types Of Ethics Or Morality ,Responsibility in Engineering

Engineering Standards ,Framing the Problems, Resolving Problems

## 9. Teaching and Learning Strategies

#### Strategy

- The lecturer prepares lectures on the subject in paper and electronic form and presents them to the students.
- The lecturer delivers lectures in detail.
- The lecturer requests periodic reports and homework assignments on the basic topics of the subject.

10. Cc	10. Course Structure
